

Isolating while on placement?

Try some of the following ideas to continue your development:

Project

- Leaflet / Poster for patients.
- Service Improvements.

Case Study

- On a patient you have seen.
- What assessment and treatment would you do?

Exercise Video

- Record yourself doing exercises.
- Create a video, to send to patients as a resource.

Self directed learning

- Research on conditions you have seen.
- Treatment options: progressions / regressions.

Communicate

- Email, message, speak to your educator. Communication is key.
- Demonstrate you are adaptable and resilient.

Tips for Educators with students isolating:

- All tasks set, must be linked to the marking criteria.
- Utilise your placement coordinators. They have access to lots of resources.
- If you use Attend Anywhere, your student can dial into the call.
- Tap into Trust In-Service Training, your student can join via Teams.
- Provide case studies for students on patients you have seen. You (or another student / therapy assistance) can call to provide relevant information.

If you are feeling anxious read this [letter](#) from a student who has previously had to isolate
