

## Information for General practice/PCNs

If you would like to host a trainee pharmacist in 2025/26, you MUST act by **1st March 2024**.

Contact Nottingham Pharmacy Workforce Faculty for support: [claire.patel7@nhs.net](mailto:claire.patel7@nhs.net)

### Background

- In January 2021, the GPhC published the revised [Standards for the Initial Education and Training of Pharmacists](#).
- These provide a set of new learning outcomes that span the whole 5-year initial training period (MPharm degree and the Foundation Training Year) and can link to a continuum of development into post-registration. They provide newly qualified pharmacists with the necessary consultation skills and confidence to provide the clinical services expected by patients and the NHS, working across health systems and will enable pharmacists to be independent prescribers at the point of registration.
- NHS England will be taking delegated responsibility from the GPhC for the quality assurance of all Foundation Training sites in 2025/26.
- For more information, please visit the [Initial Education and Training of Pharmacists – reform programme](#) webpage.

### How can General Practice/PCNs get involved?

- Become the lead employer of a trainee pharmacist.
  - Trainees will still need to have access to a setting with a dispensary that is supervised by a GPhC registrant as part of their Training Plan
- Become a partner with another employer to offer a formal multi-sector rotation, with a minimum 13-week rotation in the second sector.
- Become a partner with another employer to offer an informal placement of less than 13 weeks (e.g. as access to a prescribing environment)

### Why host a trainee?

- General practice is a rapidly developing sector of practice for pharmacy professionals with increasing numbers of practices and PCNs employing pharmacists in a patient facing role.
  - There are now over 150 pharmacists employed to work in general practice/PCN roles in Nottingham & Nottinghamshire ICS & a continued commitment to workforce training is needed.
- Employing a trainee pharmacist can help to provide general practice with a sustainable workforce pipeline.
  - Trainees can support with day-to-day workload within the practice contributing towards multiple QOF indicators or the DES (see Appendix 1).
- Hosting a trainee and watching their development can be a rewarding experience as well as providing a personal development opportunity to upskill supervisory skills.
- Working with other partners to provide training helps to build new or develop existing relationships with other healthcare providers in your local area.

- Allows you to support the development of the future workforce and showcase primary care's place in healthcare.

## What does the funding look like?

- **For 2025/26, the employer will receive funding of £26,500 per trainee.** This is a contribution to all costs of hosting a trainee, including supervision, administration, and salary costs.
  - NHS England will not set the salary that needs to be paid to a trainee, however minimum wage requirements at the time of employment must be adhered to (£22,308 for a 37.5hr week from April 2024)
- Funding that has previously been in place to support GP placement set up and delivery, as part of the national HEEGP pilot will not continue for 2025/26, however if a trainee is taken on a rotational basis from another employer a placement fee can be agreed between organisations to host a trainee pharmacist to support supervision. A suggested fee is £1,500.
- All trainees will have access to a fully funded training course provided via NHS England meaning employers will not need to source and pay for one externally.
- For more information, please visit the [Implementing the Foundation Pharmacist Training Year 2025/26](#) webpage.

## How are trainees allocated to training sites?

- All training placements must be entered into the [National Recruitment Scheme](#), (Oriel) and all trainees will be appointed via this process.
- There will be no arrangements for the recruitment/appointment of trainees, approval of training sites or funding outside of this process.
- Placements must be entered into Oriel between January 2024 and 1st March 2024.
- Employers must submit programme information via an online registration form which includes information on the:
  - Employer
  - Salary & hours
  - Training site
  - Rotational placements, if any
  - Any other benefit(s) of choosing the placement
- Students preference which training sites they would like to undertake their training in. Based on this list they are allocated to a site after undertaking assessments to demonstrate their suitability to be a Foundation Trainee Pharmacist.
- For more information, please visit the [Trainee Pharmacist National Recruitment](#) webpage.

## What are the requirements?

- To host a trainee, employers will need to ensure that the trainee has access to a:
  - Designated Supervisor (previously called pre-reg tutor)
  - Prescribing learning setting
  - Designated Prescribing Practitioner (DPP)
- The DPP and prescribing learning setting do not have to be in the primary training site but could be in another organisation that the trainee rotates into.
- When putting placements into Oriol, organisations **will not** need to identify at this stage who the DPP is and where the prescribing environment is. You will not need to notify NHS England of this until mid-2025.
- All training sites must use the [NHS England Assessment Strategy, E-portfolio](#) and engage with the Quality Framework.
- Sites will need to submit a [training plan](#) that delivers the GPhC Learning Outcomes and ensure they are approved as a GPhC Foundation Pharmacy Training site by April 2025.
- For more information, please see our [Foundation Pharmacist Training Site Requirements for 2025/26 document](#)

## Multi-sector rotations

- A multi-sector rotation is defined as a placement in another sector of 13 weeks or more.
- If a trainee undertakes a rotation of 13 weeks or more, then they must have a named designated supervisor in that site as per GPhC requirements.
  - Other employers may wish to access a prescribing environment and/or DPP for their trainee via general practice and may be looking for a partnership to provide this. Some of the funding the employer receives may be used as a placement fee, for example to secure a rotation with access to a prescribing environment and DPP as described above.
- From the 2026/27 foundation training year onwards it will become compulsory for trainees to undertake a minimum 13-week rotation into another sector of practice.

Suitability criteria for  
DS & DPP

## Prescribing

- During the training year, trainees need to undertake 90 hours of learning focussed on developing and demonstrating the skills and capabilities of a prescribing practitioner. The DPP does not need to directly supervise all 90 hours and may delegate to other appropriately qualified members of the healthcare team. This may be outside of the employing organisation where appropriate.
- Trainees must have a 'nominated prescribing area' in which they develop and demonstrate prescribing capabilities.
- The DPP does not have to be based in the site that the trainee is employed in.
- For more information, please see our [Prescribing Supervision and Assessment in the Foundation Trainee Pharmacist Programme from 2025/26](#)

## What support can I get?

- We understand that these are big changes. The Nottinghamshire Pharmacy Workforce Faculty can support you to set up potential partnerships with others in the system and provide other support local to the area.

## Appendix 1: How could a trainee support my practice?

The types of activities that trainee pharmacists could support with are as follows:

- Effective medicines reconciliation at transfers of care including investigating queries, errors and omissions
- Interpreting medical history, physical, biochemical and other clinical assessments
- Dealing with medicines-related queries from patients and colleagues
- Facilitating education and training for staff and patients on medicines-related topics
- Inputting into repeat prescription processes
- Actioning and responding to MHRA and other safety alerts
- Undertaking physical assessments with appropriate supervision
- Developing policies and effective processes for medicines governance, including controlled drugs and repeat prescribing
- Identifying topics for local audit/QI projects and participating in chosen projects
- Developing effective systems for monitoring high-risk medicines
- Monitoring and improving prescribing
- Effective antimicrobial stewardship
- Integrating the practice with local health and social care teams, including hospitals and care homes
- Using software tools to prioritise patients for medication review
- Supporting medication reviews for ambulant and housebound patients, and care home residents
- Delivering person-centred consultations about medicines, encouraging shared decision making
- Performing NHS health checks
- Caring for individuals with more long-term conditions (LTCs)
- Providing ongoing care for specific conditions (eg, secondary prevention of cardiovascular disease)
- Participating in public health campaigns

# Foundation Trainee Pharmacists in 2025/26

Trainee pharmacists could support registered healthcare professionals within practices under supervision to meet the following QOF indicators (based on 23/24 guidance).

*N.B. This list is not exhaustive.*

Atrial fibrillation	AF001, AF006, AF008
Asthma	AST005, AST007
Diabetes mellitus	DM017, DM006, DM033, DM020, DM021, DM022, DM023
Blood pressure	BP002
Cholesterol control and lipid management	CHOL01, CHOL02
Chronic kidney disease	CKD005
Chronic obstructive pulmonary disease	COPD015, COPD010
Depression	DEP004
Epilepsy	EP001
Hypertension	HYP001, HYP003, HYP007
Obesity	OB003
Osteoporosis	OST004
Rheumatoid arthritis	RA001
Secondary prevention of coronary heart disease	CHD001, CHD005, CHD015, CHD016
Smoking	SMOK002, SMOK004, SMOK005
Stroke and transient ischaemic attack	STIA001, STIA007, STIA014, STIA015

They could also support with vaccination and immunisation as per the Investment and Impact Fund as part of the Network Contract DES (based on 23/24 guidance). The registered healthcare professional will take overall professional responsibility and accountability.

### **Example:**

If an average surgery utilised a trainee pharmacist to support activities to meet their QOF CHOL001 and CHOL002 this would give them approx. £6k per practice. For the trainee pharmacist, this type of activity could easily map to the Learning Outcomes they need to demonstrate around consultation skills and IT searching/audits and shared decision making re cholesterol therapies.

## **Appendix 2: Emerging routes to early career prescribing in pharmacy**

NHSE have produced an interactive resource which explores how the foundation pharmacist learning outcomes relating to prescribing enable early career pharmacists to implement prescribing in practice.

It features seven early career pharmacists in different practice settings, highlighting their individual clinical focus, the clinical, procedural, and technical skills they'll utilise, future development opportunities, and commonalities with other areas of practice.
